

ArKaos A05 Media Server

ArKaos A05 Media Server is the 'light' version of the A10, which allows impressive performances at a reduced price.

The combination of ArKaos powerful graphic engine, the latest generation nVidia graphic card and a fast hard drive guarantees a smooth playback of 8 layers of video in standard resolution.

The A05 suits perfectly setups that do not necessarily need high definition resolutions (up to 1280 x 1024). A05 guarantees optimal performance for small installations: clubs, bars, touring bands, LED installations...

Technical specifications

- 1 HD resolution video output, up to 1920x1080
- Full layer and output previews
- Can be controlled through DMX512, ArtNet, MIDI and TCP/IP
- Automatic Fade To Black
- Pixel accurate visual position
